

Dalmatian Toadflax

(*Linaria dalmatica*)

NRCS has introduced a new program under the 2006 Colorado EQIP Invasive Plant Program to address this particular weed.

Features:

- Native of Europe
- Member of the Figwort family
- Closely resembles Yellow Toadflax
- Grows 2 - 4 feet tall
- Leaves are waxy, heart-shaped, and clasp the stem
- Flowers are snapdragon-shaped, bright yellow, with orange centers
- Invades degraded areas such as roadsides, abandoned lots and fields, gravel pits, clearings, and overgrazed rangeland.
- Difficult to manage due to its deep, extensive root system
- Rapidly invading dry rangeland from 5,000 to 8,000 feet.

How YOU Can Help

- ✓ Learn to identify invasive plant species in your area.
- ✓ Report sightings of invasive species to your local county or land management agency.
- ✓ Do not pick wildflowers or plants. They may be invasive species and picking them can spread their seeds.
- ✓ Check local weed lists before you buy plants for your garden or yard.
- ✓ Clean all camping gear, clothing, and shoes before leaving an area to avoid inadvertently taking seeds along with you to the next campsite.
- ✓ Always stay on designated trails when camping or hiking, avoiding weed infested areas.
- ✓ Drive only on established roads or trails away from weed infested areas.

For more information on the identification and control of noxious weeds contact your local NRCS and Conservation District Office.
